

KHANH LINH (KAITLYN) VUONG

Toronto, ON | 437.365.3003 | khanhlinhvuongklv@gmail.com | [LinkedIn](#) | [GitHub](#)

PROFESSIONAL SUMMARY

A passionate and adaptable tech enthusiast with proven skills in programming and web development, specializing in creating user-friendly applications using Python, C#, C++, and JavaScript. A proactive problem solver and fast learner with strong attention to detail, excellent teamwork, and a commitment to delivering innovative solutions.

TECHNICAL SKILLS

Programming Languages: C, C++, C#, Java, Python, JavaScript, HTML, CSS, XAML

Databases and Data Management: Oracle SQL, MongoDB

Frameworks and Libraries: React, Next.js, Node.js, Express.js, Django, Spring Boot, Tailwind CSS, Bootstrap, Windows Presentation Foundation (WPF)

Development Tools and Version Control: Visual Studio (2022), Visual Studio Code, GitHub, TortoiseGit, Vercel, PythonAnywhere, Figma, Visual Paradigm

Methodologies and Project Management: Agile Methodology, Scrum, Jira, Kanban, UML, SDLC

Operating Systems and Scripting: Linux, Windows 11, Bash, PowerShell

Business/Productivity: MS Word, MS PowerPoint, MS Outlook, MS Excel, MS Teams, Google Suite

EDUCATION

Advanced Diploma in Computer Programming and Analysis

January 2024 - Present

Seneca Polytechnic

Toronto, ON

CGPA: 4.0/4.0

- Built practical projects utilizing full-stack web development, object-oriented programming, and database design.
- Relevant Coursework: Object-Oriented Programming, Advanced Database Services, Web Programming Tools and Frameworks, Software Testing, Software Design and Analysis courses.

WORK EXPERIENCE

Tester Co-op

May 2025 – December 2025

Ontario Public Service | Government of Ontario

Toronto, ON

- Understanding the Software Development Life Cycle (SDLC) from a testing perspective, recognizing where manual testing fits into each phase.
- Operating within an Agile methodology, participating in sprint planning, daily stand-ups, and sprint reviews to align testing efforts with development cycles.
- Translating user stories into detailed, executable test cases, ensuring comprehensive coverage for new features and changes.
- Identifying, documenting, and tracking bugs and related issues in Jira, including steps to reproduce, actual vs. expected results, and severity/priority.
- Writing clear, concise, and reproducible test steps for manual execution, outlining expected results and identifying edge cases.
- Utilizing SQL Server Management Studio (SSMS) to write and execute complex queries, retrieving and manipulating database records to validate test data and ensure data integrity during testing cycles.
- Collaborating closely with product owners, developers, and other team members within the Agile framework to clarify requirements, discuss system behavior, and ensure quality deliverables.
- Performing thorough regression testing to confirm that new features or bug fixes do not introduce defects into existing functionalities.

TECHNICAL PROJECTS

Portfolio Website

- Tech Stack Used: React, Next.js, JavaScript, TailwindCSS, Vercel
- Engineered a highly interactive and modern personal portfolio website designed for desktop and optimized for mobile compatibility.
- Implemented advanced UI/UX features including dynamic tilted card effects, a functional image carousel for project showcases, and a unique folder/file -system interface to organize content.
- Utilized front-end technologies to deliver a responsive and smooth user experience, ensuring consistent visual presentation and functionality across all device sizes.
- Showcased technical proficiency through creative design elements that transform standard project listings into an engaging, navigable experience.

Biodiversity Solutions Website

- Tech Stack Used: Node.js, JavaScript, TailwindCSS, HTML, CSS, PostgreSQL, MongoDB, Vercel
- Developed a dynamic content platform focused on biodiversity and climate solutions, allowing registered users to create, edit, and delete articles, while all visitors can read the content.
- Implemented a dual-database strategy, using MongoDB for flexible content storage and PostgreSQL for managing user authentication and registration data.
- Integrated robust user authentication and authorization, restricting article creation/modification functionalities exclusively to registered and logged-in users for content integrity.

RPG Game

- Tech Stack Used: C#, WPF
- Developed a functional, single-player RPG using C# and WPF (XAML), adhering strictly to Object-Oriented Programming (OOP) principles for entities like Player, Monster, Weapon, and Quest.
- Designed a rich interactive interface using WPF/XAML that displays player stats, location visuals, and contextual navigation buttons (North, South, East, West) to manage movement within the game world.
- Implemented core RPG mechanics, including customizable player equipment and weapon selection, turn-based combat system for fighting monsters, a Quest system for progression and earning in-game rewards.
- Utilized data binding and event-driven architecture inherent to WPF to ensure a responsive and smooth user experience as the player interacts with the environment and engages in combat.

Library Application

- Tech Stack Used: C++
- Developed a comprehensive Library Management System in C, effectively modeling complex entities through the disciplined use of structs and function-based operations to adhere to Object-Oriented design principles.
- Implemented persistent data storage and retrieval using input/output file handling, ensuring that the system state (inventory, borrowed status) is preserved and accurately updated after every user transaction.
- Designed and implemented critical business logic, including precise name and type matching, and availability check.

ACCOMPLISHMENTS AND ACTIVITIES

Hackathon Participant - Ellehacks

February 2025

- Collaborated with a team to develop a mobile app wireframe for elderly blood sugar tracking and food analysis, utilizing Figma for UI design.
- Focused on user-centered design to facilitate informed decision-making regarding food choices and blood sugar management.

President's Honour List

May 2024 – August 2024

- Awarded to students who have achieved over 90% average in a semester.
